

TimberCast SL-Board 1000

Elegant wooden floorboard with a lovingly brushed surface, made from Siberian larch.
The stone is equipped with a smooth base, on which a 5 mm thick brushed natural wood surface is applied.
Due to the smooth base, demoulding of the concrete slab is very easy and the mould is protected.
The 5 mm thick brushed surface is sufficient to bring out the wooden character of the plank laid with a 3 mm joint.

Product details
